

The graduates of the Computer Science program are expected to attain the following objectives within a few years after graduation:

Objective 1.

The graduates use computer science knowledge and basic sciences in order to apply innovative solutions to information technology problems, and contribute to interdisciplinary engineering projects.

Objective 2.

The graduates act responsibly in the course of professional activity respecting ethical and social rules.

Objective 3.

The graduates effectively work and communicate in international and multidisciplinary teams and perform different roles using the native language and English.

Objective 4.

The graduates act in an entrepreneurial manner and be prepared to conduct business activity.

Objective 5.

The graduates pursue life-long learning and professional development through self-education, formal education, professional training and openness for innovation.
